R Markdown Example

Selcan Aydin

2022-03-19

```r
install.packages(c("tidyverse", "palmerpenguins", "rticles", "gapminder", "prettydoc", "plotly"))
```

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```r
summary(cars)
```

```
##      speed           dist
##  Min.   : 4.0   Min.   :  2.00
##  1st Qu.:12.0   1st Qu.: 26.00
##  Median :15.0   Median : 36.00
##  Mean   :15.4   Mean   : 42.98
##  3rd Qu.:19.0   3rd Qu.: 56.00
##  Max.   :25.0   Max.   :120.00
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot. You can also make interactive plots.

Changing themes

You can update the 'look' of your html document by changing the `theme` option in the `yaml`. Look here for all the free bootswatch themes that are compatible with R markdown html document https://bootswatch. com/3/.
